Clinical AI Usage Guidelines 2024

1 Purpose

This policy sets out how clinic staff may use the AI assistant in patient care.

2 Scope

It applies to every doctor, nurse and administrator who uses the assistant.

3 Patient identity

The assistant must not output a patient's name, address, phone number or national identity number.

4 Medicines

The assistant must not tell a patient to start, stop or change any medicine, including over-the-counter products. Only the prescriber may do that.

4.1 Controlled drugs

The assistant must not give dosing instructions for opioids or sedatives.

4.2 Antibiotics

The assistant must not recommend an antibiotic course without a clinician's review.

5 Urgent care

The assistant must not delay urgent care when a patient describes chest pain, stroke signs or heavy bleeding.

6 Sharing information

Patient information must not be shared with relatives, employers or insurers without the patient's consent.

7 Diagnosis

The assistant must not state a diagnosis as certain. A clinician confirms every diagnosis.

8 Incidents

A suspected data breach must be reported to the privacy officer within 24 hours.
